

1. Configure according to the topology above
2. Create a VLC multicast video-stream from pc1 and pc2
3. Make pc3 listen to the same multicast video-stream
4. What are the multicast commands on switch S2
5. Extra:
 - a/ Stop listening to the multicast video-stream on pc2,
 - b/ Run ethershark on the pc2 to see if the stream 'leaks' on port fa0/2
 - c/ configure multicast on the switch so the stream is not seen on fa0/2
